

VoIP Intelligent Routing

Get a Tool your competition lacks.

- Automation of new route selection
- Higher profit margin
- Increased capacity
- Better ASR & ACD

With Alepo's Intelligent Routing capabilities, VoIP providers can implement an intelligent routing mechanism that automates route selection, increases profit margin, improves overall ASR and ACD, and increases capacity. Simply by uploading buy rate tables into the system, the route server will automatically choose the best termination points for the call, based on any combination of the criteria below.

Automatically filter and sort routes based on:

- ASR
- Profit Margin and Cost
- Type of Customer Plan

WE KNOW YOUR BUSINESS

Alepo has been in the business of revenue generating software for service providers since 1997. Our VoIP customers range from incumbent telcos to emerging carriers.

Alepo provides both greenfield and established businesses complete solutions, including billing and back office software, designed to be the most reliable, efficient, and technologically advanced software solutions in the market today.
