- WLAN hotspots and Wireless ISPs
- PPPoE and VPN internet access
- Rented Infrastructure
- Content Subscriptions
- Voice services over IP
- Internet Kiosk and Internet Café

ALL-IN-ONE RADIUS, BILLING & CRM

From its introduction in 1997, RBS ISP has defined the ISP Billing and RADIUS market.

Winning numerous awards and selling in over 50 countries, RBS has maintained its leading edge through a unique philosophy. This philosophy proposes that even a startup ISP deserve the features normally attainable by only the largest ISPs and that even large ISPs benefit from an out-of-the-box solution that can be set up in minutes.

The result is a product that can be found in diverse environments that range from small ISPs to large broadband providers servicing over 50% of their country's users.

Maintaining its tradition, RBS today offers advanced prepaid features, complete customer self care, real time credit enforcement, online statistics and analysis tools, credit card clearing and support for xDSL, cable and wireless services through tried and proven RADIUS capabilities.

These features, and more, are in a single integrated product and are completely workable, out of the box.

RBS now comes in special packages with additional features for VoIP as well as WLAN hotspots, and WISP.

PROVEN TRACK RECORD

- Selling for more than six years
- Numerous awards by magazines and leading web sites
- Hundreds of customers in over 50 countries
- Powering national and international ISPs

RADIUS FEATURES

- ◇ Support for DSL, VPN, Dialup, 802.11 (Hotspots, and WISP), Content Subscriptions

- ◇ Import and export reports, payments and invoices from/to QuickBooks and Excel

SCALABILITY

- ◇ High availability with 99.995% uptime
- ◇ Primary \ backup modes
- ◇ Unlimited backup \ load balancing servers
- ◇ Low memory and CPU foot print
- ◇ Online backups
- ◇ Can run on same machine with RDBMS on low end systems
- ◇ Max no. of users: 10,000,000
- ◇ RADIUS authentication response: 10-40ms
- ◇ Billing cycle (user): 100-300ms

Single server supports one million users.

Laptop can serve 10,000 users.

SUPPORTED PLATFORMS

Operating systems:

- WindowsNT/2000
- Red Hat Linux
- Sun Solaris
- Client: any web browser on any operating system

Backend databases:

- Internal (MS Access MDB file)
- MS SQL 6.5 , 7 or 2000 (Standard, enterprise or MSDE)
- Oracle 8.x (Standard, enterprise or personal)
- MySQL 4.1

MINIMAL HARDWARE REQUIREMENTS

WinNT/2000 & Linux:

233Mhz or higher CPU
128MB RAM
Web browser
150MB HD Space
Network Interface Card
RADIUS compliant NAS, AP or SG

Solaris:

Sun Ultra SPARC 5+
256 MB RAM
Web browser
150MB HD Space
Network Interface Card
RADIUS compliant NAS, AP or SG
